B27

Task 1 : Portfolio Website Design

You are building a personal portfolio website to showcase your

work.

Requirements:

• Create sections for About Me, Projects, and Contact.

• Use AI to:

o Suggest color palettes and typography.

o Create a responsive layout with Grid/Flexbox.

o Add smooth scrolling navigation.

Prompt:

Build a personal portfolio website with sections about me,projects and contact with responsive layout with grid and smooth scrolling navigations

Code:

lab14-1.html > html > body > section#about > p

```html
<!-- build a personal portfolio website with sections about me,projects and contact with responsive layout with grid and add smooth scrolling navigation  -->
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Personal Portfolio</title>
    <style>
        /* Basic Reset */
        * {
            margin: 0;
            padding: 0;
            box-sizing: border-box;
        }

        body {
            font-family: Arial, sans-serif;
            background-color: #82afd8;
            color: #333;
        }

        /* Navigation */
        nav {
            background-color: #dc4545;
            padding: 10px 20px;
            position: fixed;
            width: 100%;
            top: 0;
            z-index: 1000;
        }

        nav ul {
            list-style: none;
            display: flex;
            justify-content: center;
        }

        nav ul li {
            margin: 0 15px;
        }

        nav ul li a {
            color: white;
            text-decoration: none;
```

```html
    <nav>
        <ul>
            <li><a href="#about">About Me</a></li>
            <li><a href="#projects">Projects</a></li>
            <li><a href="#contact">Contact</a></li>
        </ul>
    </nav>

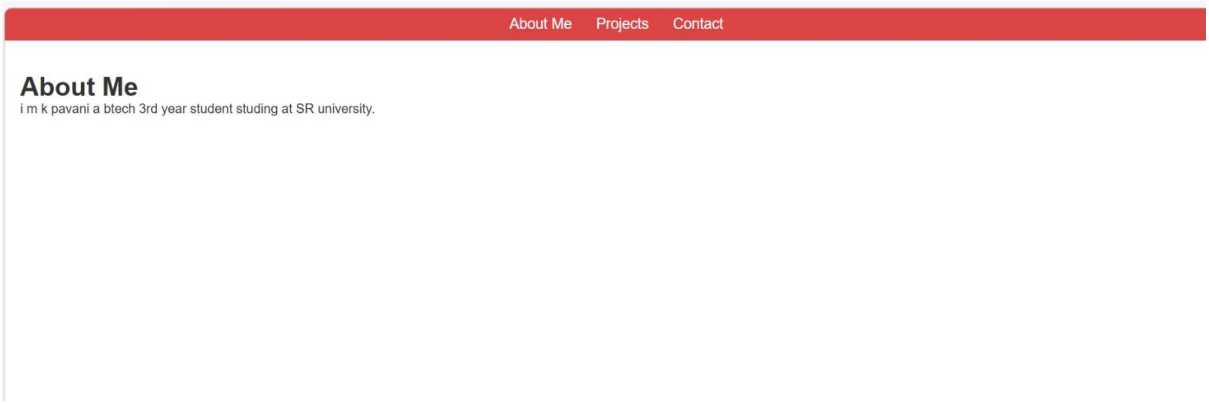
    <section id="about">
        <h1>About Me</h1>
        <p>i m k pavani a btech 3rd year student studing at SR university.I m passionate about AIML and enuthusiast about learning trending technologies</p>
    </section>

    <section id="projects">
        <h1>Projects</h1>
        <div class="grid">
            <div class="project">
                <h2>Project 1</h2>
                <p>e commerce website.</p>
            </div>
            <div class="project">
                <h2>Project 2</h2>
                <p>Online management system.</p>
            </div>
            <!-- Add more projects as needed -->
        </div>
    </section>

    <section id="contact">
        <h1>Contact</h1>
        <p>You can reach me at: <a href="mailto:pavani2310@gmail.com">

</html>
```

Output:



Explanation:

- Structured Sections: The website is divided into three main sections — About Me, Projects, and Contact — allowing visitors to easily understand who you are, see your work, and reach out to you.
- Responsive Layout with Grid/Flexbox: CSS Grid and Flexbox are used to arrange content so the portfolio automatically adjusts for mobile, tablet, and desktop screens, ensuring a clean and organized layout on any device.
- Smooth Scrolling Navigation: The navigation bar links smoothly scroll to each section of the page, improving user experience and easy navigation instead of jumping abruptly between sections.

Task 2 – Online Store Product Page

Design a product display page for an online store.

Requirements:

• Display product image, title, price, and "Add to Cart" button.

• Use AI to:

o Style with BEM methodology.

o Make layout responsive.

o Add hover effects and "Add to Cart" alert

Prompt:

Design a product display page with 5 product images take the links from the browser add title and add to cart button and style with BEM methodology and make the layout responsive and visually appealing add hover effects and add to cart alert

Code:

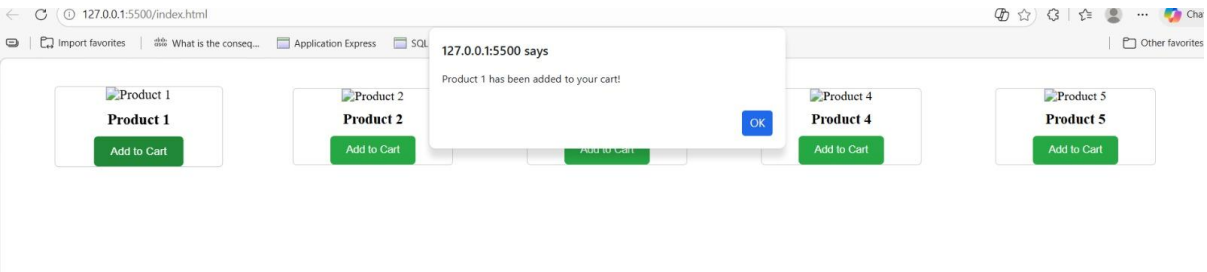
```html
<!-- design a product display page with 5 product images take thelinks from the browser add title and add to cart button and style with BEM methodology and make the layout responsive and visually appealing
 add hover effects and add to cart alert  -->
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Product Display Page</title>
    <style>
        /* BEM Methodology */
        .product-display {
            display: flex;
            flex-wrap: wrap;
            justify-content: space-around;
            padding: 20px;
        }
        .product-card {
            border: 1px solid #ccc;
            border-radius: 5px;
            width: 200px;
            margin: 10px;
            text-align: center;
            transition: transform 0.3s ease;
        }
        .product-card:hover {
            transform: scale(1.05);
        }
        .product-image {
            width: 100%;
            height: auto;
        }
        .product-title {
            font-size: 18px;
            margin: 10px 0;
        }
        .add-to-cart-button {
            background-color: #28a745;
            color: white;
            border: none;
            padding: 10px 20px;
            cursor: pointer;
            border-radius: 5px;
        }
        .add-to-cart-button:hover {
```

```html
</head>
<body>
    <div class="product-display">
        <div class="product-card">
            <img src="https://via.placeholder.com/200" alt="Product 1" class="product-image">
            <h2 class="product-title">Product 1</h2>
            <button class="add-to-cart-button" onclick="addToCart('Product 1')">Add to Cart</button>
        </div>
        <div class="product-card">
            <img src="https://via.placeholder.com/200" alt="Product 2" class="product-image">
            <h2 class="product-title">Product 2</h2>
            <button class="add-to-cart-button" onclick="addToCart('Product 2')">Add to Cart</button>
        </div>
        <div class="product-card">
            <img src="https://via.placeholder.com/200" alt="Product 3" class="product-image">
            <h2 class="product-title">Product 3</h2>
            <button class="add-to-cart-button" onclick="addToCart('Product 3')">Add to Cart</button>
        </div>
        <div class="product-card">
            <img src="https://via.placeholder.com/200" alt="Product 4" class="product-image">
            <h2 class="product-title">Product 4</h2>
            <button class="add-to-cart-button" onclick="addToCart('Product 4')">Add to Cart</button>
        </div>
        <div class="product-card">
            <img src="https://via.placeholder.com/200" alt="Product 5" class="product-image">
            <h2 class="product-title">Product 5</h2>
            <button class="add-to-cart-button" onclick="addToCart('Product 5')">Add to Cart</button>
        </div>
    </div>

    <script>
        function addToCart(productName) {
            alert(productName + " has been added to your cart!");
        }
    </script>
</body>

</html>
```

Output:



Explanation:

- Product Display with BEM Styling: Each product card shows the product image, title, price, and an “Add to Cart” button, and the CSS follows BEM (Block Element Modifier) methodology to keep the code structured, reusable, and easy to maintain.
- Responsive Layout: The page uses Flexbox with wrapping, allowing the five product cards to automatically adjust and align properly on mobile, tablet, and desktop screens.
- Interactive Features: Hover effects slightly enlarge the product card for better visual interaction, and clicking the “Add to Cart” button triggers an alert message, confirming that the product has been added to the cart.

Task 3 – Event Registration Form

Build an event registration form for a conference.

Requirements:

• Collect name, email, phone number, and session selection.

• Use AI to:

o Add form validation with JavaScript.

o Make the form accessible with labels and ARIA.

o Style with a professional look

Prompt:

Build an event registration form for a conference with name,email,phone number and session selection also add form validation with js make the form accessible with labels and ARIA and style with a professional typography styles ,use CSS Grid and Add smooth scroll navigation between sections.

Code:

```
ers > Ashwitha > Downloads > index.html > ...
<!-- build an event registration form for a conference with  name,email,phone number ans session selection also add form validation with js make the form accessible with labels and ARIA and style with a profe
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Conference Registration Form</title>
    <style>
        body {
            font-family: Arial, sans-serif;
            background-color: #f4f4f4;
            margin: 0;
            padding: 20px;
        }
        .container {
            max-width: 500px;
            margin: auto;
            background: #fff;
            padding: 20px;
            border-radius: 8px;
            box-shadow: 0 0 10px rgba(0, 0, 0, 0.1);
        }
        h2 {
            text-align: center;
            color: #333;
        }
        label {
            display: block;
            margin-bottom: 5px;
            color: #555;
        }
        input[type="text"], input[type="email"], input[type="tel"], select {
            width: 100%;
            padding: 10px;
            margin-bottom: 15px;
            border: 1px solid #ccc;
            border-radius: 4px;
        }
        button {
            width: 100%;
            padding: 10px;
            background-color: #28a745;
            color: white;
            border: none;
            border-radius: 4px;

    <div class="container">
        <form id="registrationForm" aria-label="Conference Registration Form">
            <input type="tel" id="phone" name="phone" aria-required="true" required pattern="[0-9]{10}">

            <label for="session">Select Session:</label>
            <select id="session" name="session" aria-required="true" required>
                <option value="">--Please choose an option--</option>
                <option value="session1">Session 1: AI and Machine Learning</option>
                <option value="session2">Session 2: Web Development</option>
                <option value="session3">Session 3: Cybersecurity</option>
            </select>

            <button type="submit">Register</button>
        </form>
    </div>

    <script>
        document.getElementById('registrationForm').addEventListener('submit', function(event) {
            event.preventDefault();

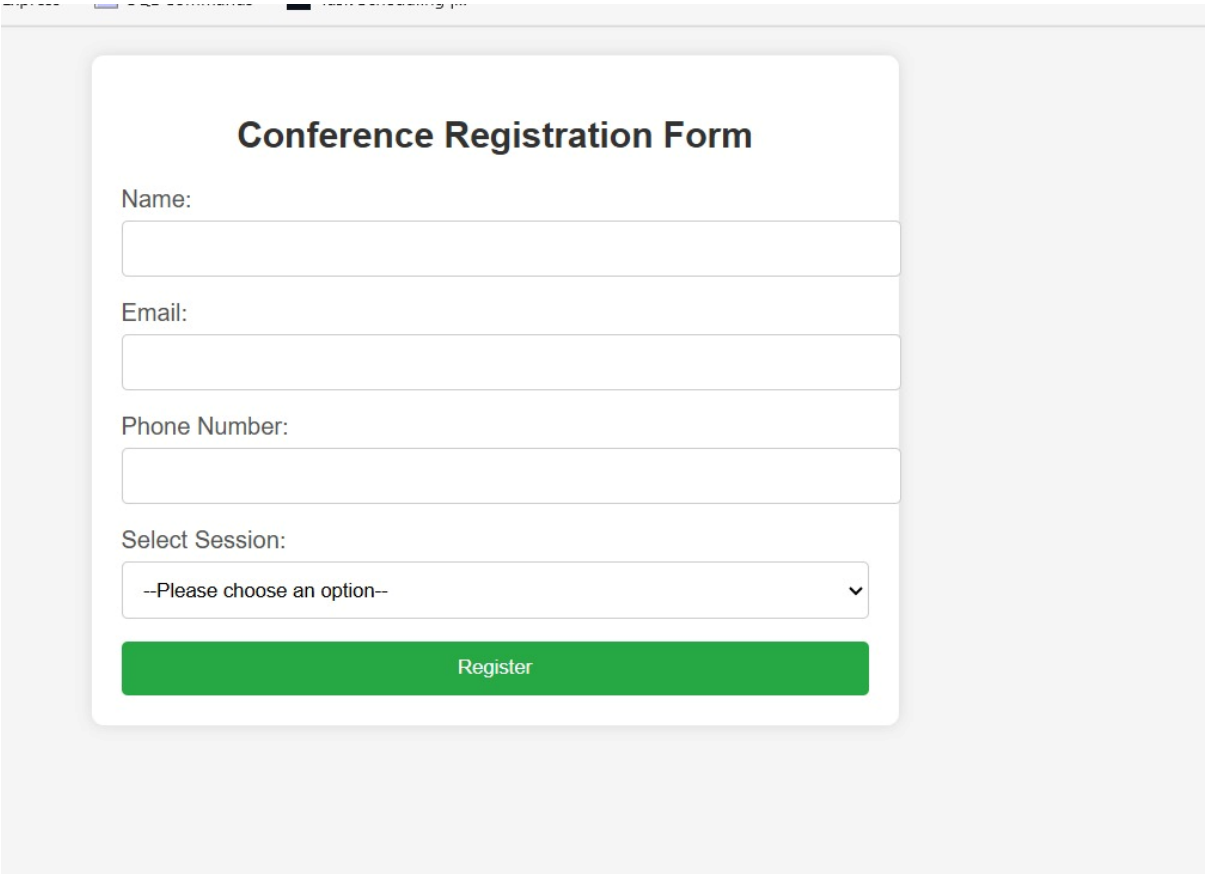
            const name = document.getElementById('name').value.trim();
            const email = document.getElementById('email').value.trim();
            const phone = document.getElementById('phone').value.trim();
            const session = document.getElementById('session').value;

            if (!name || !email || !phone || !session) {
                alert('Please fill in all fields.');
                return;
            }

            if (!/^\d{10}$/.test(phone)) {
                alert('Please enter a valid 10-digit phone number.');
                return;
            }

            alert('Registration successful!');
            this.reset();
        });
    </script>
</body>
```

Output:



Explanation:

- Form Structure & Accessibility: The form collects name, email, phone number, and session selection with proper labels and ARIA attributes, making the form accessible and easy to use for all users.
- JavaScript Validation: Form validation using JavaScript ensures users enter correct details (valid email, phone number, and required fields) before submitting the registration form.
- Professional & Responsive Design: The form uses CSS Grid for layout, clean typography, and smooth scrolling navigation to create a professional, responsive interface that works well on different devices.

Task 4 – Resume Website

Build a one-page online resume.

Requirements:

• Sections: Profile Summary, Skills, Education, Experience.

• Use AI to:

o Propose professional typography styles.

o Align sections using CSS Grid.

o Add smooth scroll navigation between sections.

Prompt:

Build a one page resume include sections like profile summary skills education and experience also propose typography styles,align sections with CSS Grid.add smooth scroll navigation between sections.

Code:

```
<!-- build a one page online resume include sections like profile summary skills education and experience also propose peofessional typographic styles and align sections with css grid and add smooth scroll

            <ul>
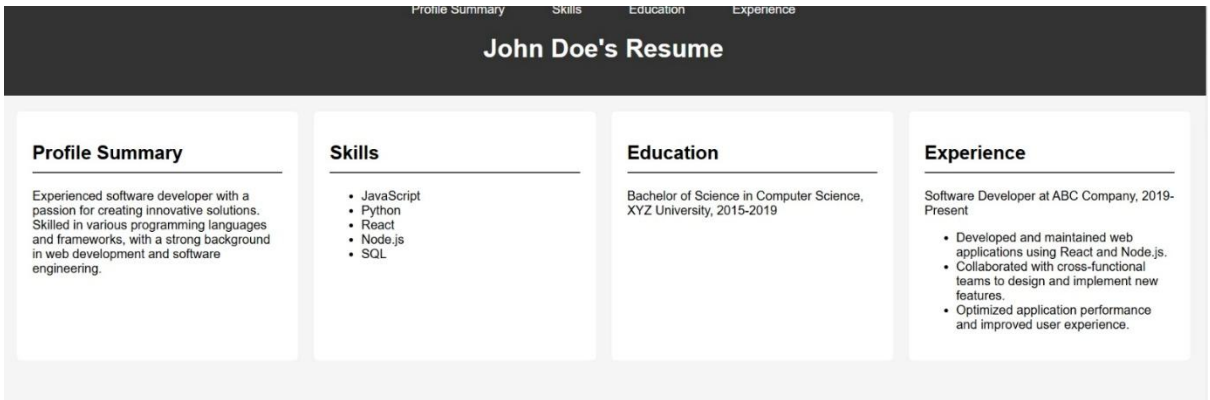
                <li>Developed and maintained web applications using React and Node.js.</li>
                <li>Collaborated with cross-functional teams to design and implement new features.</li>
                <li>Optimized application performance and improved user experience.</li>
            </ul>
        </section>
    </div>

    <script>
        // Smooth scroll navigation
        document.querySelectorAll('nav ul li a').forEach(anchor => {
            anchor.addEventListener('click', function (e) {
                e.preventDefault();
                document.querySelector(this.getAttribute('href')).scrollIntoView({
                    behavior: 'smooth'
                });
            });
        });
    </script>

</html>
```

Output:



Explanation:

- Resume Sections: The one-page resume includes Profile Summary, Skills, Education, and Experience, allowing recruiters to quickly view the candidate's background and qualifications in a structured format.
- Professional Typography & Layout: Clean typography styles (such as Arial or similar professional fonts) are used, and CSS Grid aligns the sections neatly, making the resume visually organized and easy to read.

- Smooth Navigation: A fixed navigation bar with smooth scrolling allows users to quickly move between resume sections, improving usability and providing a modern single-page website experience.

Task 5 – Restaurant Menu Page

Design a digital menu page for a restaurant.

Requirements:

• Display menu items with name, description, and price.

• Use AI to:

o Suggest a food-friendly color palette.

o Design a responsive card-based layout.

o Add hover effects on menu items

Prompt:

Design a digital menu page for a restaurant to Display menu items with name, description, and price with a food-friendly color palette also design a responsive card-based layout add hover effects on menu items

Code:

```html
<!-- design a digital menu page for a restaurant to display menu items with name,description,and price with a food friendly color palette also design a responsive card based layout add hover effects on menu

```

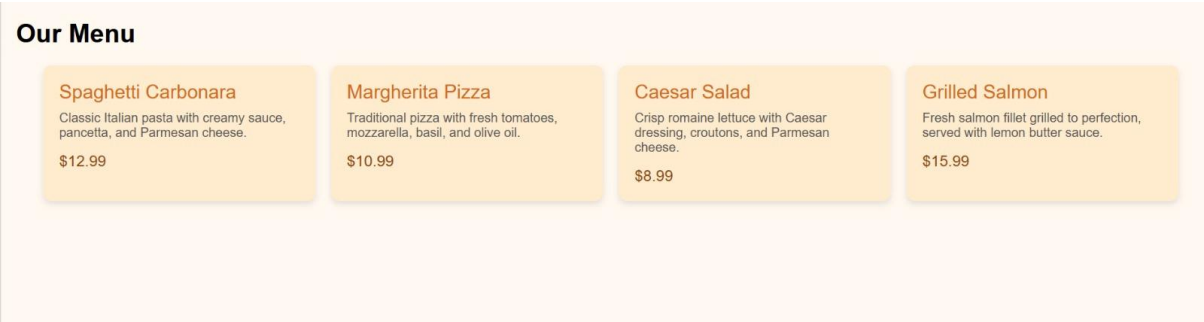
Output:



Explanation:

- Menu Item Display: Each menu card shows the food name, description, and price, helping customers easily understand what the dish is and how much it costs.
- Food-Friendly Color Palette & Layout: Warm colors like cream, orange, and brown are used to create a food-friendly look, and the menu items are arranged in a responsive card-based layout using Flexbox so they adjust well on different screen sizes.
- Interactive Hover Effects: When a user hovers over a menu card, subtle animations like lift or shadow effects appear, making the menu visually engaging and improving the user experience.
